

## CONSERVATION TIPS

- Water between dusk and dawn.
- Embrace xeriscape with drought-tolerant plantings.
- Sprinkle water not pavement.
- Tune up irrigation systems to ensure they are functioning properly.
- Water deeply but less often, most lawns need just 2.5 cm of water per week.
- Water stays longer when grass is longer (5-8 cm).
- Aerate your lawn in spring or fall to improve water penetration. Water works best with compost, which minimizes over-fertilizing.
- Leave grass clippings as mulch.
- Save water on shrubs, trees and gardens with drip irrigation.
- Collect and use rainwater.
